# Probability Distributions

## Poisson

The Poisson distribution is used to model a situation where an event occurs at a fixed rate.

You can model  $X$  as a Poisson distribution if:

- The events must occur independently
- They must occur singly in space or time
- The events must occur at a constant average rate

|                                       |  |              |
|---------------------------------------|--|--------------|
|                                       | Formula Book                                   |              |
| If $X \sim \text{Po}(\lambda)$ , then | $P(X = x) = \frac{e^{-\lambda} \lambda^x}{x!}$ | $(x \geq 0)$ |

## Geometric

The Geometric distribution is used to model a situation where you try an event several times until a success occurs, and you want to know how many tries it will take.

You can model  $X$  as a Geometric distribution if:

- Each attempt is independent
- Each attempt has the same probability

|                                  |                             |           |
|----------------------------------|-----------------------------|-----------|
|                                  | Formula Book                |           |
| If $X \sim \text{Geo}(p)$ , then | $P(X = x) = p(1 - p)^{x-1}$ | $(x > 0)$ |

|                               |                                |
|-------------------------------|--------------------------------|
| Remember                      |                                |
| $P(X \leq x) = 1 - (1 - p)^x$ | $P(X \geq x) = (1 - p)^{x-1}$  |
| $P(X > x) = (1 - p)^x$        | $P(X < x) = 1 - (1 - p)^{x-1}$ |

# Probability Generating Functions

The **probability generating function (PGF)** of a probability distribution  $X$  is some function  $G_X(t)$  of a dummy variable  $t$  such that:

Remember

$$G_X(t) = E(t^X) = \sum_x P(X = x)t^x$$

$$G_X(1) = 1$$

$$Y = aX + b \implies G_Y(t) = t^b G_X(t^a)$$

Formula Book

$$E(X) = G'_X(1)$$

$$\text{Var}(X) = G''_X(1) + G'_X(1) - (G'_X(1))^2$$

$$Z = X + Y \implies G_Z(t) = G_X(t) \times G_Y(t)$$
